

Legal

Within the legal environment, PaperCut is well suited to integrate with the most popular legal billing software solutions, such as PCLaw, ProLaw, Juris, Timeslips, and Tabs3.

The Benefits

Import to PaperCut

Import to PaperCut requires a tab delimited file. This can be created directly for import or an application can be created to take an existing export from the billing software and convert it to the required format.

Export to PaperCut

PaperCut provides a large number of useful reports for shared account use. These reports even include invoicing type reports. Some customers prefer to have the data exported from PaperCut to import back into their billing software. PaperCut easily creates a .CSV file that can be readily imported into your accounting software.

Automatically convert print jobs to gray scale and duplex.

Previously PaperCut could only disallow all single sided and color printing jobs on a printer, but now jobs can be automatically converted to duplex and/or gray scale. For instance always force staff to print duplex or use conditional scripting to automatically convert all Outlook email messages to gray scale.

Track your firms printing and copying usage with real-time reporting.

On the completion of each copy session (when the user presses end) the details of the copy transaction are logged into PaperCut in real-time. Provision for network failure is provided enabling session replay from memory. Administrators have access to the same PaperCut reporting and management features as they would have for a standard printer.

Secure Print Release & Find-Me Printing

In a standard printing environment, a user's jobs are sent directly to the printer/MFP for immediate printing. This results in wasted paper and toner when printing is forgotten and not collected. It also presents a security risk if those forgotten jobs were sensitive or confidential. PaperCut print release provides a simple solution that places jobs in a holding state until the user authenticates and releases the job at the printer.

Guarantee that your clients are billed for every print, copy, fax and scan.

PaperCut's advanced client software empowers users to allocate print jobs to specific accounts, allowing you to recover costs from clients, projects and/or departments. A pop-up window actively prompts users to allocate print jobs to specific client accounts.
